

Leveraging vCISO to Strategize and Implement Cybersecurity Goals

Companies with worldwide operations require security capabilities with appropriate scale and agility. The Client is a distributor for innovative manufacturing materials: they required outside expertise for an unbiased assessment of potential information security needs. Propelex responded with Virtual CISO leadership that delivered value-focused solutions for Compliance Alignment, Security Technology Roadmap, and Gaps Remediation.

Making Compliance Simpler

Maintaining security and privacy compliance can be challenging for enterprises that operate globally. Standards are continuously evolving, some may be contradictory, and it's difficult to understand how to efficiently align compliance with business goals and mission.

The Client needed a **solution** that could:

-  Understand requirements across disparate jurisdictions
-  Align people, processes, and technology to security and privacy demands
-  Achieve continuous compliance, without being a resource burden

Propelex Virtual CISO was a game-changer that simplified and streamlined the Client's compliance functions. Automating key processes helped their team do more with fewer resource inputs, powered by insights that paved the way for better, more confident risk decisions.

Upgrading Technologies Intelligently

Matching information security program goals with the right supporting security tools and technologies is essential for success. However, many enterprises struggle to make wise investments in people, processes, and technologies, especially if their business mission is outside the traditional cybersecurity domain.

Virtual CISO from Propelex created a security technology roadmap that helped the Client prioritize investment needs to make the most impact. Our team provided the resources and expertise to develop and implement an upgrade tailored to their overall security strategy, including their unique security and privacy needs.

- The Propelex Virtual CISO was onboard during the critical processes to deploy the **new technologies** and make them operational. Now the Client has a security infrastructure that works seamlessly in their existing information environment, hardens them against attacks, and extends their protection capabilities.

Closing Gaps and Optimizing Protection

The Client's new technologies and systems were purpose-designed to close security gaps and provide an exceptionally high level of protection. The Propelex Virtual CISO helped them fully integrate all program elements into an efficient and value-focused security program:

- ✔ Performed a comprehensive gap analysis to understand and prioritize actions
- ☰ Spotlighted regulatory compliance gaps for technical design, security controls, policies, and documentation
- ☰ Recommended both infrastructure- and application-specific security architecture changes designed to simplify ongoing compliance
- ✔ Provided guidance and direct assistance managing Corrective Action Plans (CAPs)
- ✔ Developed and presented rapid, prioritized, and pragmatic gap remediation strategies

Looking Ahead

The Client is well positioned to make information security a value center for the company. Propelex Virtual CISO services are driving an ongoing journey founded on a successful information security program that is ideally suited to the Client's needs.

There's much more to learn about the advantages Propelex Virtual CISO can bring to your organization. Contact us today, and we'll share the full range of capabilities and benefits that can help propel your digital transformation.
